Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being independently unpatentable over Achammer et al. (US 5,495,501) and Ritz et al. (US 5,693,793). The Achammer et al. reference teaches a process of preparing caprolactam from 6-aminocapronitrile and separating caprolactam and high boilers by distillation (see col. 1, lines 35-57). Ritz et al. (US 5,693,793) teaches that the removal of caprolactam and high boilers is preceded by the removal of ammonia and water (see col. 6, lines 10-19) in a process of preparing and purifying caprolactam.

The claims differ by requiring that the bottom temperature does not go below 170°C and adjusting the second substream such that the caprolactam content of the second substream is not less than 75% by weight. That is, the claims differ by varying the process conditions. The claims differ by varying the process conditions. However, selection of the appropriate process conditions would have been prima facie obvious because where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation, *In re Aller*, 220 F.2d 454, 105 USPQ 233, 235 (CCPA 1955).
